**Date of publication**  
2020/12/04

**Date of revision**  
2024/03/27  
Version: 04

**Date of validity**  
2025/12/04

**CPC Code**  
214 Prepared and preserved  
fruits and nuts  
**2022/2023 production**

**Programme**  
The International EPD® System  
[www.environdec.com](http://www.environdec.com)

**Programme operator**  
EPD International AB

This EPD has been developed in accordance with ISO 14025. An EPD should provide current information, and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at [www.environdec.com](http://www.environdec.com)

**VOG Products** is an innovative company located in Laives in the Northern Italy specialising in the processing of apples and other fruit. It is owned by 18 cooperatives in South Tyrol and Trentino and four producers organisations comprising over 13,000 family-run enterprises. Every year, VOG Products process more than 300,000 tonnes of raw goods to create healthy, safe products for the international market. Its product portfolio includes fruit juices, fruit pulp and purees, concentrated juice, natural flavourings, cooked fruit, frozen fruit and sliced fresh cut fruit.

**Respectful handling of resources, corresponding management and intervention are important to give a contribute to outline the environmental impacts along the value chain and increase our transparency towards our stakeholders.**

# The apple puree

Apple puree is produced from ripe and health apples, grown with the method of integrated and organic production. The cleaned apples are transported to the cold sieving, the method assure particular gently raw material processing. Straining and sieves extract the skin, stalks and cores of the apple and the fruit pulp become hot sieved and gently refinement to a humogen puree. The pasteurisation process guarantee that our puree is well preserved and that top quality is maintained also in storage.

The quality of the raw materials is ensured by careful selection of varieties, cultivation areas, agronomic techniques and harvesting methods and times.

VOG Products has established strong relationships of deep trust with producers, who are able to guarantee freshness and quality that respect our very high standards.

**Trentino - South Tyrol has perfect conditions for apple cultivation. It is home to the largest enclosed area in Europe for apple cultivation. The result is a rich harvest, a wide range of varieties and apples with a splendid colour and unique flavour.**

**One in five apples picked in Trentino-South Tyrol is processed by VOG Products to be made into apple puree or other products successfully exported all around the world.**

## PRODUCT CONTENTS

The puree is made from **100% apples** from different varieties, to prevent the naturally oxidation process ascorbic acid is added (<0.1%).

Apples contain many vitamins and minerals, especially **vitamin C** and **potassium**. They are rich in **pectin**, a food fiber very important for a good digestion and for an extended sensation of satiety.

ENERGY VALUE	NUTRIZIONAL INFORMATION (PER 100 G)
	<b>Fat &lt;0.1 g</b> of which saturates <0.1 g
	<b>Carbohydrate 12.8 g</b> of which sugars 12.3 g
	<b>Food fibers 2.4 g</b>
	<b>Proteins 0.6 g</b>
	<b>Salt &lt;0.1 g</b>

## FUNCTIONAL UNIT

The data presented are referred to **1 kg of apple puree produced in VOG Products plant in Laives, Italy, and sold in several countries:**

**in a 200 kg steel drum**, relating to one steel drum containing an aseptic PE bag with 200 kg of product;

**in a 1200 kg steel goodpack**, relating to one galvanized steel container containing an aseptic PE bag with 1200 kg of product;

**in a tinplate can**, relating to one can by tinplate with 3,05 or 4,2 kg of products;

**in a 1000 kg bag-in-box**, relating to one PP box containing an aseptic PE bag with 1000 kg of product;

**Unpacked, in bulk.**

The apple puree, subject of the declaration, are intended as beverage compounds. For this reason, the study is conducted up to the VOG Products customer, excluding any additional processing and repackaging of the product.

This EPD refers to the average values for the **2022/2023 production:**

**Agricultural phase:** 01/01/2022 - 31/10/2022

**Production process phase:** 01/07/2022 - 30/06/2023

# The methodology for the calculation

The Environmental performance of the product was calculated using the LCA (life cycle analysis) methodology, by analyzing the impacts of the activities carried out during all the phases from the orchard until the delivery of the finished product to the client and the Packaging end of life.

The study was conducted following the specific product rules published for the "CPC code 2149 - Other prepared and preserved fruit and nuts".

The contribution to the environmental impacts brought by generic data is less than 10% in all impact categories.

## UPSTREAM RAW MATERIALS CULTIVATION AND PROCESSING

All the apples used for the apple puree come from the cooperatives of Trentino - South Tyrol (Italy).

8% of the apples used came directly from the field, the remaining 92% is conferred to VOG Products after a preliminary selection process by the cooperatives' plants. The percentages of the apple varieties used are presented in the graph.

The main environmental factors for the field phase concern fuels and water consumption, together with the use of pesticides and fertilizers. Data related to inputs used for the apples cultivation are primary and came directly from the farmers and then validated with the regulation of the interested areas.

Electricity and water are the main impacts of the first storage and preliminary processing phase. Data came from a sample of production plants and are primary.

- 68% GOLDEN DELICIOUS
- 17% OTHER VARIETIES
- 10% GALA
- 4% GRANNY SMITH
- 1% FUJI

The land use change was not included in the calculation since almost all the orchards are in the areas subject of the study for over 20 years.

Environmental performances related to apples transport from the field and the cooperatives' plants to VOG Products plant were evaluated considering road transport (truck) using 2022/2023 primary data. Secondary data, mainly from Ecoinvent database, are used for transport means.

## UPSTREAM PACKAGING AND AUXILIARY MATERIALS

### PACKAGING

The apple puree is delivered with five different solutions:

#### 42% 200 KG STEEL DRUM

one steel drum containing an aseptic PE bag with 200 kg of product

#### 26% 1000 KG BAG-IN-BOX

one PP box containing an aseptic PE bag with 1000 kg of product

#### 20% UNPACKED, IN BULK

#### 8% TINPLATE CAN

one can by tinplate with 3,05 or 4,2 kg of products

#### 4% 1200 KG STEEL GOODPACK

one galvanized steel container containing an aseptic PE bag with 1200 kg of product

Primary data from the technical data sheet have been used.  
 Secondary data (Ecoinvent) are used for environmental aspects associated with the production and processing of the materials.

Environmental performances related to packaging transport have been calculated considering road transport (truck) using 2022/2023 primary data. The auxiliary materials transport from the suppliers to VOG Products plant has been estimated considering road transport (truck) for 200 km.

Secondary data, mainly from Ecoinvent database, are used for transport means.

### PACKAGING FOR DISTRIBUTION

For the products shipped in the steel drum and in the tinplate can, the packaging for transport consists in a wooden pallet.  
 The reuse of the pallet for 20 times has been considered.

The data used have been collected by LCA database (mainly Ecoinvent).

### AUXILIARY MATERIALS

Auxiliary materials (such as detergents and lubricant oil) environmental performances are evaluated by using primary data from the plant of the consumption during 2022/2023 year.

Secondary data (Ecoinvent) are used for environmental aspects associated to materials production.

## ☾ CORE PRODUCTION PROCESS

### GENERAL INFORMATION

The environmental performances related to the production process are evaluated considering primary data for energy and water consumption and the waste production. Secondary data (Ecoinvent) are used for the environmental aspects related to the production of energy and water.

Unless otherwise specified, the overall value is attributed to the product using the mass allocation procedure, because the plant produces other products beyond apple puree.

Data are referred to year 2022/2023 and are country specific (Italy), where available.

### ELECTRICITY BY GRID

Electricity consumption has been divided using mass allocation on the overall products of the department.

Electric energy production is related to hydropower and to photovoltaic technology.

### COGENERATOR

Electric and thermal energy products by the cogenerator has been evaluated using primary data about natural gas consumption and energy production.

### NATURAL GAS

The consumption of natural gas used of heat purpose is evaluated using primary data.

### WATER

The well and tap water consumption is evaluated using primary data.

### WASTE

The primary data are collected by the plant registrations. The overall value is attributed to the product using the mass allocation procedure.

## DOWNSTREAM DISTRIBUTION

The apple puree is delivered in 30 countries from the VOG Products production plant based in Laives, Italy.

Primary data were used for distances covered by truck, ship and train for each packaging tipology. Secondary data (Ecoinvent database) were used for transport means.

Data refers to 2022/2023.

The Puree does not need any particular condition (such as refrigeration) during distribution.

## DOWNSTREAM PACKAGING END OF LIFE

Due to the complexity of the system, the environmental performances of Packaging end of life are elaborated not on the primary packaging (unknown) but on the packaging used for delivery as **an average of the end of life scenarios** of the most representative distribution countries for each type of packaging, covering at least **90%** of the total volume delivered\*.

### STEEL DRUM

**COUNTRIES: (~91%)**  
Belgium, Denmark, France, Germany, Netherlands, Italy, Spain, USA

### GOODPACK

**COUNTRIES: (~100%)**  
Netherlands

### TINPLATE CAN

**COUNTRIES: (~95%)**  
Austria, Germany, USA

### BAG-IN-BOX

**COUNTRIES: (~93%)**  
Germany, France, Netherlands, Spain

# Glossary and references

## ACIDIFICATION

It is a phenomenon for which precipitation is unusually acidic, meaning that it has substandard levels of pH. It can have harmful effects on plants, aquatic animals and infrastructure. Acid rain is caused by emissions of SO<sub>2</sub>, di NOx e di NH<sub>3</sub>. The acidification potential is measured in mass of sulfur dioxide equivalent (SO<sub>2</sub>-eq).

## EUTROPHICATION

It is an excessive proliferation of vegetation in the aquatic ecosystems caused by the addition of nutrients into rivers, lakes or ocean, which determinates a lack of oxygen. The utrophication potential is mainly influenced by emission into water of phosphates and nitrates. It is expressed in mass of PO<sub>4</sub><sup>3-</sup> equivalent.

## PHOTOCHEMICAL OXIDANTS CREATION

Chemical reaction brought about by the light energy of the sun. The reaction of nitrogen oxides with hydrocarbons in the presence of sunlight forms the ozone in the troposphere. The indicator is mainly influenced by VOCs (Volatile organic compounds) is usually expressed in mass of non-metallic organic compounds (NMVOC).

## CARBON FOOTPRINT

A product carbon footprint is the total amount of greenhouse gases produced along the entire life cycle. It is expressed in equivalent mass of carbon dioxide (CO<sub>2</sub>-eq).

## LAND USE CHANGE

The land use change is the change of the destination of use of a soil that modifies its ability to absorb atmospheric CO<sub>2</sub>.
